PROFESSIONAL SUMMARY

Site Reliability Engineer with 5+ years of experience building and scaling Kubernetes-based platforms in fintech and cloud environments. Proven track record improving uptime (99.95%+), reducing incident rates, and accelerating deployments through automation (Terraform, GitOps, CI/CD). Experienced across AWS, Azure, and modern DevOps practices, with a strong focus on reliability, observability, and production resilience at scale.

PROFESSIONAL EXPERIENCE

Site Reliability Engineer (DevOps and Observability)

Mobile Tutors | Sept 2025 - Present

- Designed, deployed, and operated Kubernetes-based platform infrastructure on EKS using Infrastructure as Code (Terraform), improving system scalability and increasing environment consistency by 60%+
 - Managed and optimized Kubernetes clusters (auto-scaling, networking, resource tuning), achieving 99.95%+ service uptime and reducing resource waste by 30%
 - Built and maintained CI/CD pipelines (GitHub Actions / GitLab CI) integrated with ArgoCD (GitOps) and Helm, increasing deployment frequency by 3x while reducing failed releases by 40%
 - Defined and enforced SLIs/SLOs and error budgets, reducing incident rates by 35% and improving overall service reliability
 - Implemented observability across Kubernetes environments using Prometheus, Grafana, and OpenTelemetry, decreasing mean time to detection (MTTD) by 50%
 - Led incident response for Kubernetes-based production systems, conducting blameless postmortems that drove continuous improvements and reduced recurring issues by 30%
-

Site Reliability Engineer (Application Reliability & Automation)

Interswitch | Sept 2023 – Aug 2025

- Maintained 99.9% uptime for mission-critical fintech applications on AWS, supporting high-volume transaction systems and improving customer experience

- Improved system reliability by reducing MTTD by 25% and recurring incidents by 45% through enhanced observability and RCA aligned with ITIL standards.
 - Designed and automated CI/CD pipelines for containerized deployments using Docker, Kubernetes, and ArgoCD, increasing release consistency and reliability.
 - Streamlined operations through infrastructure automation using Terraform, Ansible, PowerShell, and Python, reducing manual effort.
 - Led monitoring, payments domain expertise, and large-scale system changes (including merchant migrations and compliance updates), while strengthening documentation and knowledge sharing
-

Cloud Infrastructure Engineer (Microsoft 365 & Hybrid Systems)

Microsoft (Contract | Upwork) | Feb 2024 – Nov 2024

- Designed and managed hybrid IAM solutions using Microsoft Entra ID, Azure AD Connect, and ADFS, enabling secure SSO and conditional access.
 - Automated user lifecycle management, compliance, and reporting workflows with PowerShell and Microsoft Graph API, reducing administrative overhead.
 - Strengthened Microsoft 365 security through MFA, Conditional Access, RBAC, and tenant-level compliance configurations.
 - Served as an escalation point for complex cloud identity and M365 issues across Exchange Online, SharePoint, Teams, and OneDrive, improving system performance and user experience.
 - Enhanced reliability and operations through proactive monitoring (Azure Monitor, Splunk), incident response, documentation, and support workflow improvements including AI-driven initiatives.
-

Cloud & Systems Engineer (Hybrid Infrastructure Support)

Tek Experts | Sept 2020 – Aug 2023

- Supported hybrid cloud environments by integrating on-prem Active Directory with Microsoft Entra ID and Office 365, enabling secure SSO and directory synchronization.
- Led migrations from on-prem Exchange and file servers to Exchange Online and SharePoint Online with minimal downtime.
- Automated support workflows using PowerShell, reducing resolution times and improving operational efficiency.

- Delivered advanced support and optimization across Exchange Online, Teams (including Direct Routing and Calling Plans), SharePoint, and OneDrive for SMB and enterprise clients.
 - Strengthened security and operations through governance policies (MFA, DLP, phishing protection), while enhancing team capability via documentation and mentoring L1/L2 engineers.
-

EDUCATION

B.Sc. Computer Science | University of Lagos

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ900)
- Microsoft Certified: Security, Compliance, and Identity Fundamentals (SC900)
- Lean Six Sigma Yellow Belt
- Linux Administration (Udemy)
