PROFESSIONAL SUMMARY

Site Reliability Engineer with 5+ years designing and operating large-scale AWS-native production infrastructure using Kubernetes/EKS, Terraform, and full-stack observability tooling including Dynatrace, Prometheus, Grafana, and OpenTelemetry. Proven record of improving uptime to 99.95%+, reducing incident rates by 35%, and accelerating deployment frequency 3x across high-volume distributed systems. Strong scripting capability across Python, JavaScript, Bash, and PowerShell. Experienced in GitOps, CI/CD automation, SLO ownership, and AI-enhanced observability at scale.

TECHNICAL SKILLS

Cloud Platforms: AWS (EKS, EC2, S3, IAM, CloudWatch), Azure, GCP, Linux, Docker, Kubernetes

Kubernetes and Containers: Kubernetes/EKS, Docker, Helm, ArgoCD including cluster operations, autoscaling, networking, and resource tuning

Infrastructure as Code: Terraform (modular, remote state, multi-environment), Ansible, ARM

CI/CD and GitOps: GitHub Actions, GitLab CI, ArgoCD, Helm

Observability and Monitoring: Prometheus, Grafana, Dynatrace (APM, Dashboards, Alert Tuning), OpenTelemetry, Azure Monitor, ServiceNow, KQL, Splunk

Scripting and Development: Python, JavaScript, Bash, PowerShell

SRE Practices: SLIs/SLOs, Error Budgets, Blameless Postmortems, Incident Response, Chaos/DR Validation, Canary and Blue-Green Deployments

PROFESSIONAL EXPERIENCE

Site Reliability Engineer (DevOps focus and Observability)

Sept 2025 to Present

Expedier

- Design, deploy, and operate Kubernetes platform infrastructure on EKS using Terraform IaC, building reusable modules for reproducible, auditable environment provisioning including BC/DR validation routines.
- Lead active migration of production services into Kubernetes, managing both application-layer and IaC code changes to move mission-critical workloads into a modern cloud-native architecture on AWS.
- Manage and optimize Kubernetes/EKS clusters including autoscaling, networking, and resource tuning, achieving 99.95%+ service uptime and reducing resource waste by 30%.
- Build and maintain CI/CD pipelines using GitHub Actions and GitLab CI integrated with ArgoCD and Helm, increasing deployment frequency 3x while reducing failed releases by 40%.
- Implement enterprise observability using Prometheus, Grafana, Dynatrace, and OpenTelemetry including dashboard creation, alert configuration, telemetry collection, and AI-assisted event correlation, decreasing MTTD by 50%.
- Design alerting and event correlation mechanisms to reduce alert noise, improve signal quality, and accelerate incident response across production environments.
- Define and enforce SLIs/SLOs and error budgets, reducing incident rates by 35%.
- Lead incident response for Kubernetes-based production systems, performing root cause analysis using logs, metrics, and tracing data, and conducting blameless postmortems.

Site Reliability Engineer (Application Reliability and Automation)

Sept 2023 to Aug 2025

Interswitch

- Maintained 99.9% uptime for mission-critical fintech applications on AWS (EKS, EC2, S3), supporting high-volume transaction systems processing millions of requests daily.
- Improved system reliability by reducing MTTD by 25% and recurring incidents by 45% through enhanced observability, event analysis, and root cause investigations aligned with ITIL practices.

- Designed and automated CI/CD pipelines for containerized deployments using Docker, Kubernetes, and ArgoCD, increasing release consistency and reliability.
- Streamlined operations through infrastructure automation using Terraform, Ansible, PowerShell, and Python, reducing manual effort by 46%.
- Performed root cause analysis using logs, metrics, and tracing data to troubleshoot and resolve incidents across distributed AWS production systems.
- Implemented staged rollout strategies including canary and blue-green deployments to reduce deployment risk and release confidence in production environments.
- Supported enforcement of policy-driven access controls and security configurations across AWS environments, using ServiceNow for incident tracking and change management to improve governance consistency and audit readiness.

Cloud Infrastructure Engineer (Microsoft 365 and Hybrid Systems)

Feb 2024 to Nov 2024

Microsoft (Contract via Upwork)

- Designed and managed hybrid IAM solutions using Microsoft Entra ID, Azure AD Connect, and ADFS, enabling secure SSO and conditional access for 500+ users across multiple tenants.
- Developed PowerShell and Microsoft Graph API automation workflows reducing administrative overhead by 30% with full audit trail compliance.
- Leveraged Azure Monitor and KQL-based log queries to investigate incidents, improve system performance, and support audit readiness.
- Enhanced reliability through proactive monitoring using Azure Monitor and Splunk, incident response, and AI-assisted documentation and workflow improvements.

Cloud and Systems Engineer (Hybrid Infrastructure Support)

Sept 2020 to Aug 2023

Tek Experts

- Provided L2/L3 support across hybrid cloud environments for 50+ enterprise clients, integrating on-premises Active Directory with Microsoft Entra ID.
- Automated support workflows using PowerShell and JavaScript, reducing resolution times and improving operational efficiency.
- Mentored L1/L2 engineers and strengthened team capability through documentation and knowledge sharing.

Web Developer

May 2019 to Aug 2020

Eden Life Inc

- Developed secure, scalable backend APIs with Laravel and SQL, powering dynamic frontend components in Vue.js and ensuring efficient, reliable data handling across the full stack.
- Built and scaled a customer-facing web platform using Nuxt.js, Vue.js, and Laravel, improving core web vitals, reducing load times, and directly contributing to lower bounce rates and higher customer conversion.
- Drove iterative UX improvements by translating user feedback into prioritized development tasks, delivering customer-centric features on time within Agile and Jira workflows with consistent code quality via Git.
- Maintained platform reliability through real-time issue resolution and proactive support, minimizing user-facing disruptions and sustaining high satisfaction across the customer journey.

EDUCATION

Post Graduate Diploma IT Cloud Specialist | Canadian Business College

BSc Physiology | University of Lagos

CERTIFICATIONS AND TRAINING

- Microsoft Certified: Azure Fundamentals (AZ-900)
- Microsoft Certified: Security, Compliance and Identity Fundamentals (SC-900)
- Certified Kubernetes Administrator (CKA)
- HashiCorp Terraform Associate
- GitOps and Kubernetes with ArgoCD
- CI/CD Pipeline Optimization
- Linux Administration
- Lean Six Sigma
